ADP,ATP carrier protein T3 - human
N;Alternate names: ADP,ATP carrier protein T2
C;Species: Homo sapiens (man)
A; Molecule type: mRNA
A; Residues: 36-104,'R',106,'A',109-298 <HOU>
A; Cross-references: GB: J03592; NID: g339722; l
A; Experimental source: liver

DISEASE: Defects in SLC25A4 are a cause of autosomal dominant progressive external ophthalmoplegia with various mitochondrial DNA deletions (PEO). Patients with PEO have mitochondrial myopathy, progressive external ophthalmoplegia, and other abnormalities associated with multiple different deletions of mitochondrial DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SUBUNIT: Homodimer.
